

ABSTRACT OF THE DISCLOSURE

0025- The technical disclosures of the E-Z Flow Anfo system will be as follows.

0026- This system will allow the delivery of blasting materials to a blast hole without dangerous pressure vessels. This system will not use complicated controls that are normally over ridden. This system will take the shape of the vehicle that carries it affording better visibility for the operator. This system uses vacuum instead of pressure to stage the Anfo, for loading. One person instead of two can operate this system. When cleaning time comes it can be opened without taking the tank apart. This system will require much less horsepower for the same amount of work done using today's method of delivery. This system is very much safer then the Anfo systems being used at this time.
